

THE 2-HOUR AI PROTOTYPE TEST

Build, market, and validate any startup idea in a single afternoon
â€” without writing a line of code.

01 — WHAT YOU'LL LEARN

- ✓ The exact 5-step Manus + Higgsfield + CapCut + Meta Ads stack
- ✓ Copy-paste prompts for Manus, Nano Banana 2 / GPT image 2, and Seedance 2.0
- ✓ A 7-day, \$50 ad test that tells you if the idea is actually worth pursuing
- ✓ Kill criteria so you stop pouring money into duds

01 — THE LOOP

Most ideas die in a Notion doc. This loop forces you to ship a working prototype, a brand, a 6-second ad, and a paid traffic test in one afternoon. If real strangers click and convert, you have a signal worth chasing. If they do not, you saved yourself six months.

01

SELF-PROMPT MANUS

Ask Manus to write the build prompt for itself, then paste it back in. Manus produces a deployable v1 of the product.

02

GENERATE BRAND ASSETS

Use Higgsfield's Nano Banana 2 or GPT image 2 to create a mascot, logo, and key visuals from a single brand brief.

03

ANIMATE WITH SEEDANCE 2.0

Feed your brand image into Higgsfield Seedance 2.0 with a scene prompt. Stitch the clips together in CapCut for a 6-15 second hook.

04

SHIP A META AD

Spin up a Facebook page, drop the video into Ads Manager, point it at the live prototype URL, and run a \$5-10/day traffic + leads test.

05

READ THE SIGNAL, NOT THE VIBES

After 72 hours of spend, score CTR, CPC, and conversion against the kill criteria on page 4. Double down or shut it off.

PRO TIP

Do not refine the idea in your head. Refine it in the market. The whole point is that the ad data, not your taste, decides what survives.

02 — THE PROMPTS

MANUS SELF-PROMPT (PASTE THIS FIRST)

You are about to build a v1 prototype of [ONE-LINE IDEA].
Target user: [WHO]. Core job: [WHAT THEY WANT TO DO IN 30 SECONDS].

Write the FULL prompt I should paste back into you to actually build it.
The prompt must include: stack, page-by-page UX, the single core action, any API keys I need (e.g. ElevenLabs), and a deploy step.
Be opinionated. Pick one path. No options.

HIGGSFIELD IMAGE PROMPT (NANO BANANA 2 / GPT IMAGE 2)

Brand mascot for [PRODUCT NAME], a [ONE-LINE IDEA] for [TARGET USER].
Style: [e.g. soft 3D, pastel, Pixar-adjacent, friendly].
Mood: [e.g. calm, premium, playful].
Produce a hero shot of the mascot, centered, clean studio background, ready to drop into a 9:16 ad.

SEEDANCE 2.0 SCENE PROMPT

Animate the attached image. Camera: slow push-in.
Action: [mascot performs the core product action in 1 sentence].
Lighting: soft, cinematic. 6 seconds. 9:16. End on a clean hold so I can overlay text in CapCut.

PROMPT RULE

Every prompt above hard-codes the audience and the single core action. Vague prompts produce vague prototypes “and vague prototypes never convert.

03 — THE AD SETUP

You are not running a brand campaign. You are running a forced-choice signal test. Optimize for cheap, fast learning.

SETTING	USE	WHY
Objective	Leads or Traffic	Cheapest path to a clear yes/no signal
Budget	\$5-10/day x 7 days	Enough volume to read CTR + CPC, small enough
Audience	Broad, age 25-55, 1 interest	Let the algo find the buyer; do not over-target
Placements	Reels + Stories only	Forces 9:16 native creative, kills cheap impressions
Creatives	3 hooks x 1 body	Hook is the variable, body is the control
Landing	Prototype URL or waitlist	Send traffic to the actual product, not a deck

HOOK VARIANTS TO SHIP

1) Problem-agitate hook 2) Before/after hook 3) 'I built this in 2 hours' POV hook. One of these usually wins by a wide margin.

04 — IS IT ACTUALLY WORKING?

Most people see one good comment and convince themselves the idea is a hit. Use these thresholds instead. They are intentionally strict “that is the point.

METRIC	KILL	KEEP GOING	DOUBLE DOWN
CTR (link)	< 1.0%	1.0 - 1.8%	> 1.8%
CPC	> \$1.50	\$0.60 - \$1.50	< \$0.60
Landing -> action	< 5%	5 - 12%	> 12%
Cost per lead/signup	> \$15	\$5 - \$15	< \$5
Day-3 verdict	Shut off	Iterate hook	Scale budget 2x

HONEST SIGNALS (NOT VANITY)

Strangers clicking "not friends"
 Strangers completing the core action "not just visiting"
 Repeat actions or referrals within 7 days
 Inbound DMs asking 'is this real / when can I pay'

THE 72-HOUR RULE

If after 72 hours of spend nothing is above the 'Keep going' bar on any row, shut it off and run the loop again on a new idea. Cheap learning beats stubborn.

05 — RUN THE LOOP

- ☐ Wrote a one-line idea + target user
- ☐ Manus produced a working prototype URL
- ☐ Higgsfield generated brand image + mascot
- ☐ Seedance 2.0 produced a 6-15s 9:16 clip
- ☐ CapCut stitched final ad with hook text
- ☐ Facebook page + Ads Manager campaign live
- ☐ \$5-10/day budget, 7-day test scheduled
- ☐ Day-3 review against the kill criteria
- ☐ Decision logged: KILL / ITERATE / SCALE
